SOFTWARE-PYTHON

- Python is a high-level, general-purpose programming language.
- Its design philosophy emphasizes code readability with the use of significant indentation.
- Python is dynamically-typed and garbage-collected.
- It supports multiple programming paradigms, including structured, object-oriented and functional programming.

The image shows a Windows desktop environment. A black command prompt window titled "Python3.11(54-bit)" is open, displaying the following text:

```
Python 3.11.8 [main, Oct 24 2022, 18:16:46] [MSC v.1913 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.
>>> print("hello world")
hello world
>>>
```

Below the command prompt is the Windows taskbar. It includes the Start button, a search bar with the text "Search the web and Windows", and several application icons: File Explorer, Microsoft Edge, Task View, and others. The system tray on the right shows the time as 10:25 PM and the date as 10/31/2022.

Thus we downloaded and installed software.
